

## Rob Woodward

Rob's ASM-2 system called the Provectus (the Latin word "Provectus" means advanced, advanced in age) follows the classic 'Old School' synth design of an integrated system.

The front panel was constructed as a temporary design using dry transfers and large enough to allow modifications. The front panel will, eventually, be professionally done once he has decided on a final design. The keyboard is a PAIA 8700 model, Pitch/Mod Wheel assembly is from a Yamaha B-200. He has added two LFO's on the front end (VCO Modulation) and built Ray Wilson's Single Buss keyboard controller

*The ASM-2 and supporting circuits mounted to the rear of the front panel.*

The wooden cabinet with power supply and keyboard controller ready to take the front panel.

The finished unit.
