

ED109-TGTSH Threshold Gate Trigger Sample & Hold

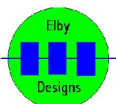

The Panther EDxxx Series is a collection of modules designed to fit the EuroRack module size.

The ED109 – Threshold Gate Trigger Sample & Hold Module

The ED109-TGTSH is a module that combines two important synthesizer functions. It produces trigger and gate signals whenever a "timing" signal input crosses a user-defined threshold. At the same time, the trigger pulse fires a high-performance sample-and-hold circuit that samples a second "main" signal input.

Power Requirements	+12V @ 5mA, -12V @ 5ma
Module Width	10HP
