

# WARNING - LETHAL VOLTAGES

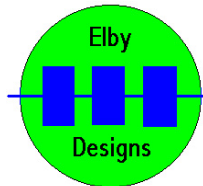

(Combined IEC Inlet, 20mm Fuseholder and DPDT Switch)

If using a SPDT switch then this MUST be fitted in the ACTIVE line

ALL of these components should, preferably, be mounted close together.  
 ALL wiring should be suitably rated for mains voltage use.  
 ALL connections should be well insulated.  
 Ideally these components should be mounted in a suitable enclosure with only the low-voltage transformer windings been bought out. The IEC socket should then be mounted in the enclosure so that it can be accessed through a suitable access hole in the main cabinet.
